

# **CS898 - Technological Solutions to Social Problems of Computing Fall 2019**

**Prof. Robin Cohen**

**Time and location: (Monday mornings 930am-1120am; DC2568)**

This message is dated September 20, 2019.

Enrolment in CS898 for Fall 2019 is now closed. We have had two classes already and the students in the course are already organized into groups for their groupwork.

This message is dated September 13, 2019.

If you are interested in the course but have been unable to register for it in Quest: PLEASE do show up to the next class Sep 16 as we will be trying to move forward with class groupwork by Sep 17, aiming to close off enrolment shortly afterwards. You may email me to request a permission number for the course, as the current system is blocking enrolment without these numbers.

If you are interested in Auditing the course, you can also let me know. Audits will be able to participate in the brainstorming sessions.

Regarding the Category and Area for this course, for those students trying to meet degree requirements per our posted chart of categories, you will notice that there is none listed. This first of all means that no student needs to worry about oversubscribing in a particular area by taking this course. Of the three categories, the ones that this course meets best is Applications. If you are in need of an Applications course, you should be able to convince the CS Grad Office to accept this course under that category.
