

# A Survey of Deductive Databases

Raghu Ramakrishnan and Jeffrey D. Ullman

CS 848, Fall 2016

University of Waterloo

Presented by: Siddhartha Sahu

# Overview

- Relational Databases
- Deductive Databases
- Datalog
- Example Queries
- Query Execution
- Conclusion and Discussion

# Relational Databases

# Relational Databases

Predominant model for data storage and processing

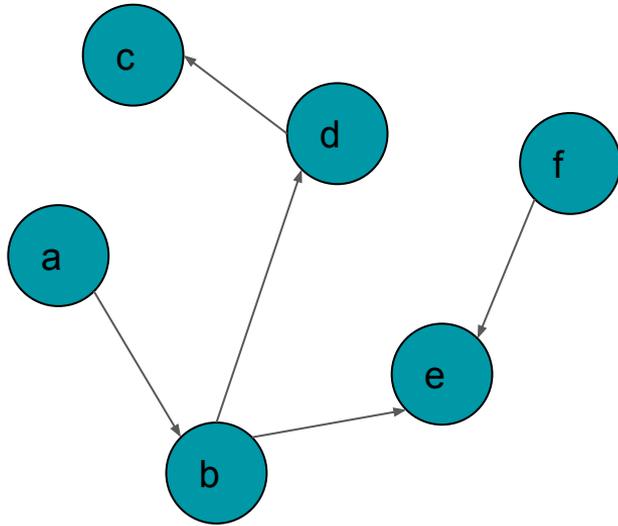

# Relational Databases

**Predominant** model for data storage and processing

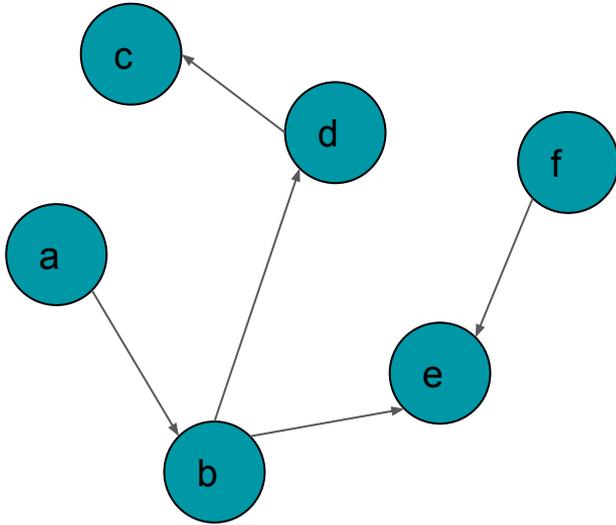

Declarative language: focus on **what** rather than how

# Relational Databases

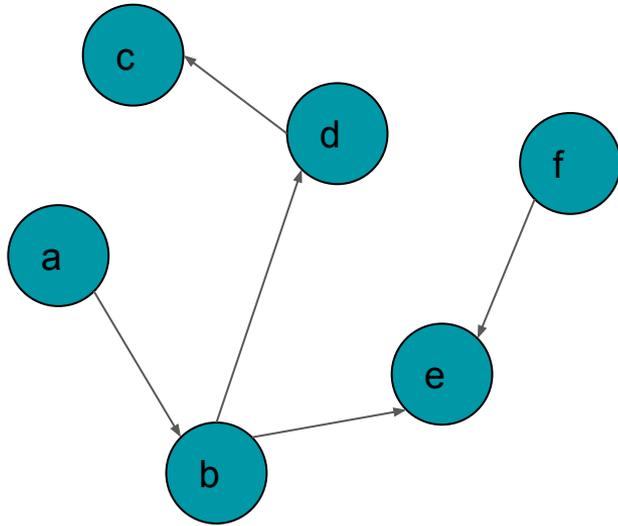

# Relational Databases

INSERT INTO edges (...)

| edges   |       |
|---------|-------|
| id_from | id_to |
| a       | b     |
| b       | d     |
| b       | e     |
| d       | c     |
| f       | e     |

# Relational Databases

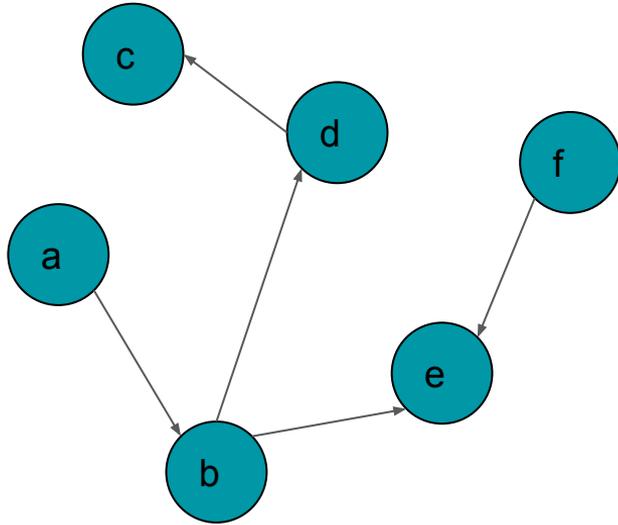

INSERT INTO edges (...)

| edges   |       |
|---------|-------|
| id_from | id_to |
| a       | b     |
| b       | d     |
| b       | e     |
| d       | c     |
| f       | e     |

Q: List vertices that vertex 'b' have an outgoing edge to.

# Relational Databases

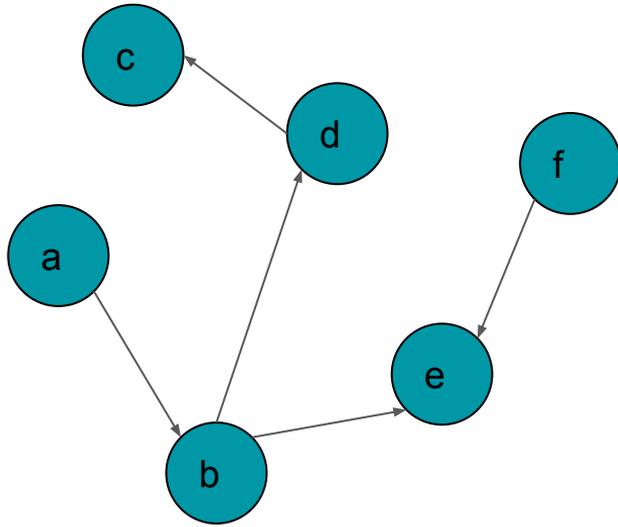

INSERT INTO edges (...)

| edges   |       |
|---------|-------|
| id_from | id_to |
| a       | b     |
| b       | d     |
| b       | e     |
| d       | c     |
| f       | e     |

**Q:** List vertices that vertex 'b' have an outgoing edge to.

**A:** `SELECT id_to from edges WHERE id_from = 'b'`

# Relational Databases

INSERT INTO edges (...)

| edges   |       |
|---------|-------|
| id_from | id_to |
| a       | b     |
| b       | d     |
| b       | e     |
| d       | c     |
| f       | e     |

Q: List all vertex pairs  $(x,y)$ , such that  $y$  is reachable from  $x$ .

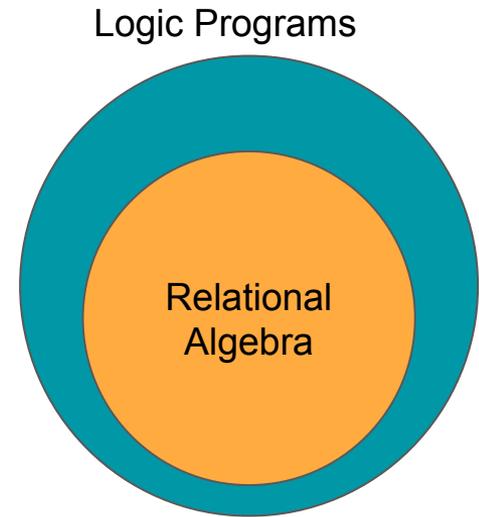

A: ?

# Deductive Databases

# Deductive Databases

Support a superset of relational algebra.

- Supports all queries from relational algebra.
- Supports recursions.

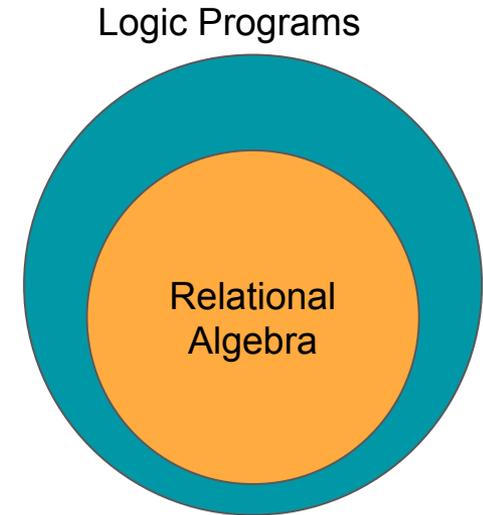

# Deductive Databases

Support a superset of relational algebra.

- Supports all queries from relational algebra.
- Supports recursions.

Datalog: subset of Prolog, a logic programming language

- Database centric requirements
- Emphasis on completeness and termination
- Queries on data stored on secondary storage

# Deductive Databases

Support a superset of relational algebra.

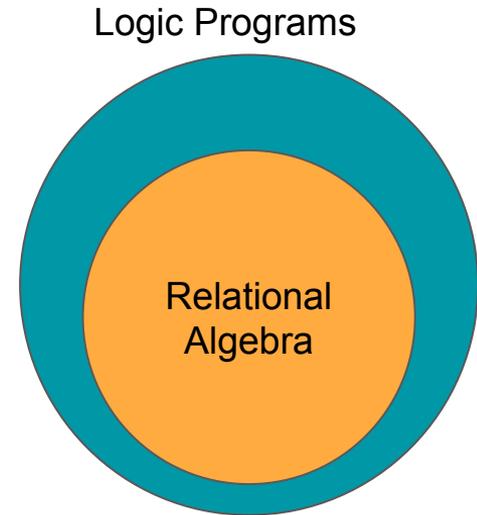

- Supports all queries from relational algebra.
- Supports recursions.

Datalog: subset of Prolog, a logic programming language

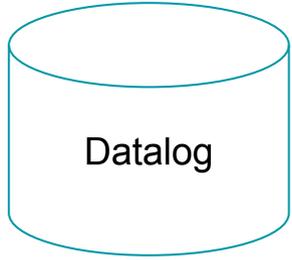

- Database centric requirements
- Emphasis on completeness and termination
- Queries on data stored on secondary storage

A database of facts.

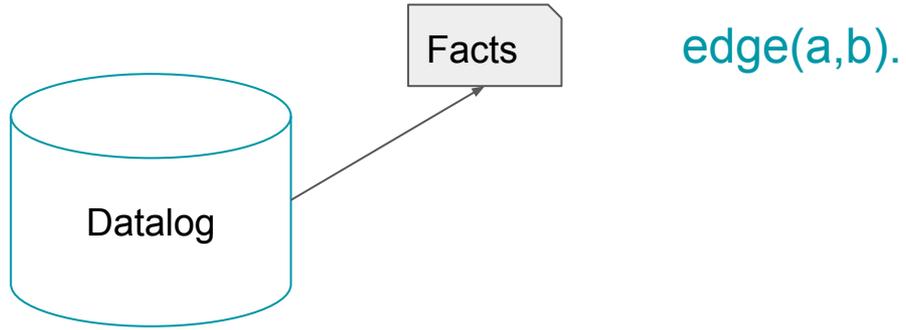

A set of rules for deriving new facts from existing facts.

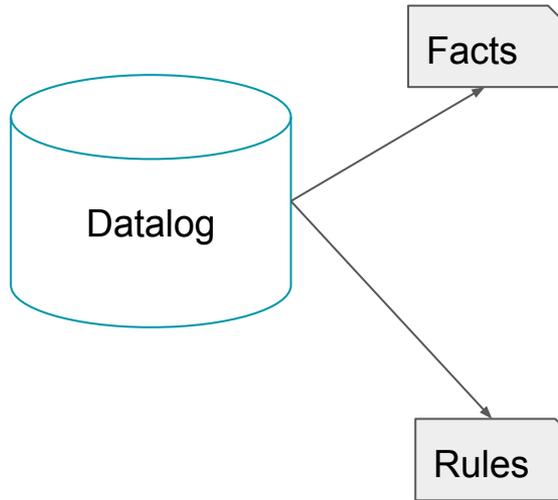

# Datalog: Terminology

# Datalog: Terminology

# Datalog: Terminology

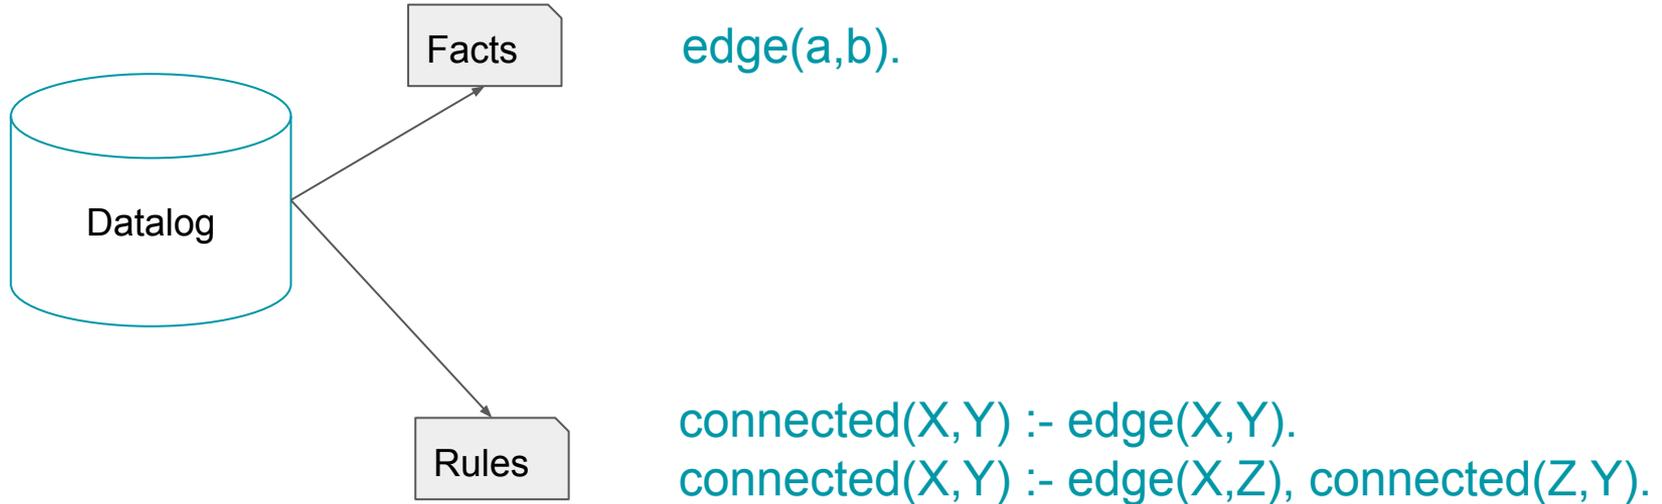

`edge(a,b).`

`connected(X,Y) :- edge(X,Y).`

`connected(X,Y) :- edge(X,Z), connected(Z,Y).`

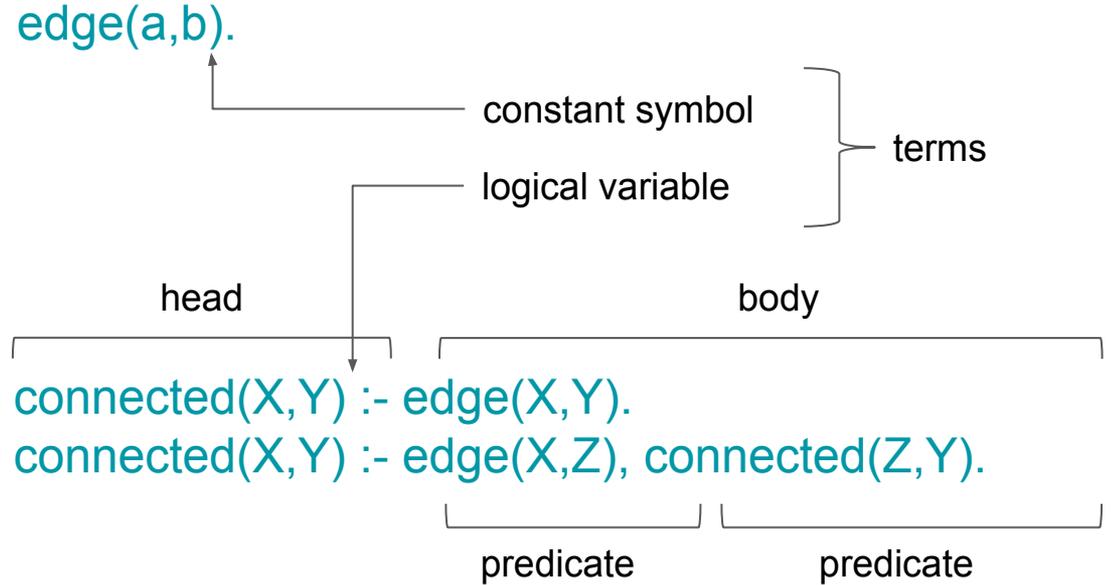

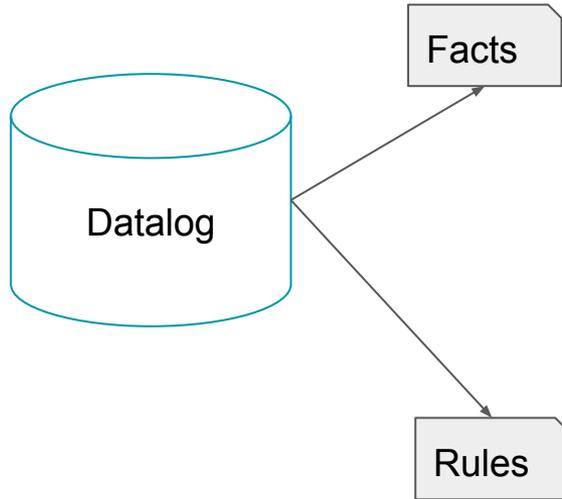

# Datalog: Terminology

Implication/Clause:  $A_0 :- A_1, A_2, \dots, A_k$  where  $A_0$  is **true** if  $A_1$  and  $A_2 \dots$  and  $A_k$  are **true**.

$k = 0$ : fact;  $k > 0$ : rule

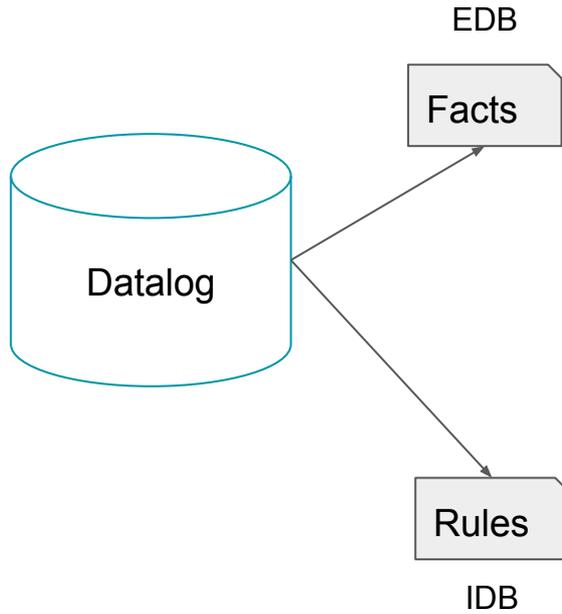

# Datalog: Terminology

Implication/Clause:  $A_0 :- A_1, A_2, \dots, A_k$  where  $A_0$  is **true** if  $A_1$  and  $A_2 \dots$  and  $A_k$  are **true**.

$k = 0$ : fact;  $k > 0$ : rule

# Datalog: Terminology

`edge(a,b).`

constant symbol

logical variable

terms

head

body

`connected(X,Y) :- edge(X,Y).`

`connected(X,Y) :- edge(X,Z), connected(Z,Y).`

predicate

predicate

Implication/Clause:  $A_0 :- A_1, A_2, \dots, A_k$  where  $A_0$  is **true** if  $A_1$  and  $A_2 \dots$  and  $A_k$  are **true**.

$k = 0$ : fact;  $k > 0$ : rule

# Datalog: Examples

| <b>users</b> |
|--------------|
| uid          |
| name         |
| age          |

| <b>accounts</b> |
|-----------------|
| uid             |
| account_type    |
| amount          |

# Datalog: Examples

| <b>users</b> |
|--------------|
| uid          |
| name         |
| age          |

| <b>accounts</b> |
|-----------------|
| uid             |
| account_type    |
| amount          |

`users(42, 'Jane Doe', 26).`

`accounts(42, 'savings', 5692.23)`

# Datalog: Examples

## Selection

Q: List all users with **age** > 23.

| users |
|-------|
| uid   |
| name  |
| age   |

| accounts     |
|--------------|
| uid          |
| account_type |
| amount       |

users(42, 'Jane Doe', 26).

accounts(42, 'savings', 5692.23)

# Datalog: Examples

## Selection

Q: List all users with **age** > 23.

| users |
|-------|
| uid   |
| name  |
| age   |

| accounts     |
|--------------|
| uid          |
| account_type |
| amount       |

users(42, 'Jane Doe', 26).

accounts(42, 'savings', 5692.23)

Relational Algebra:  $\sigma_{\text{age} > 23}(\text{users})$

SQL: SELECT \* FROM users WHERE **age** > 23;

# Datalog: Examples

## Selection

Q: List all users with **age** > 23.

| users |
|-------|
| uid   |
| name  |
| age   |

| accounts     |
|--------------|
| uid          |
| account_type |
| amount       |

users(42, 'Jane Doe', 26).

accounts(42, 'savings', 5692.23)

Relational Algebra:  $\sigma_{\text{age} > 23}(\text{users})$

SQL: SELECT \* FROM users WHERE **age** > 23;

Datalog: S(Uid, Name, Age) :- users(Uid, Name, Age), **Age** > 23.

# Datalog: Examples

## Projection

Q: List **name** of users with age > 23.

| users |
|-------|
| uid   |
| name  |
| age   |

| accounts     |
|--------------|
| uid          |
| account_type |
| amount       |

users(42, 'Jane Doe', 26).

accounts(42, 'savings', 5692.23)

# Datalog: Examples

## Projection

Q: List **name** of users with age > 23.

| users |
|-------|
| uid   |
| name  |
| age   |

| accounts     |
|--------------|
| uid          |
| account_type |
| amount       |

users(42, 'Jane Doe', 26).

accounts(42, 'savings', 5692.23)

Relational Algebra:

$\pi_{\text{name}}(\sigma_{\text{age} > 23}(\text{users}))$

SQL:

SELECT **name** FROM users WHERE age > 23;

# Datalog: Examples

## Projection

Q: List **name** of users with age > 23.

| users |
|-------|
| uid   |
| name  |
| age   |

| accounts     |
|--------------|
| uid          |
| account_type |
| amount       |

users(42, 'Jane Doe', 26).

accounts(42, 'savings', 5692.23)

Relational Algebra:  $\pi_{\text{name}}(\sigma_{\text{age} > 23}(\text{users}))$

SQL: SELECT **name** FROM users WHERE age > 23;

Datalog: P(**Name**) :- users(Uid, Name, Age), Age > 23.

# Datalog: Examples

## Join

Q: List **name**, **amount** of users with age > 23.

| users |
|-------|
| uid   |
| name  |
| age   |

| accounts     |
|--------------|
| uid          |
| account_type |
| amount       |

users(42, 'Jane Doe', 26).

accounts(42, 'savings', 5692.23)

# Datalog: Examples

## Join

Q: List **name**, **amount** of users with age > 23.

| users |
|-------|
| uid   |
| name  |
| age   |

| accounts     |
|--------------|
| uid          |
| account_type |
| amount       |

users(42, 'Jane Doe', 26).

accounts(42, 'savings', 5692.23)

Relational Algebra:

$\pi_{\text{name,amount}}(\sigma_{\text{age} > 23}(\text{users} \bowtie_{\text{uid}} \text{accounts}))$

SQL:

SELECT **name,amount** FROM users,accounts

WHERE users.uid = accounts.uid AND age > 23;

# Datalog: Examples

## Join

Q: List **name**, **amount** of users with age > 23.

| users |
|-------|
| uid   |
| name  |
| age   |

| accounts     |
|--------------|
| uid          |
| account_type |
| amount       |

users(42, 'Jane Doe', 26).

accounts(42, 'savings', 5692.23)

Relational Algebra:

$\pi_{\text{name,amount}}(\sigma_{\text{age} > 23}(\text{users} \bowtie_{\text{uid}} \text{accounts}))$

SQL:

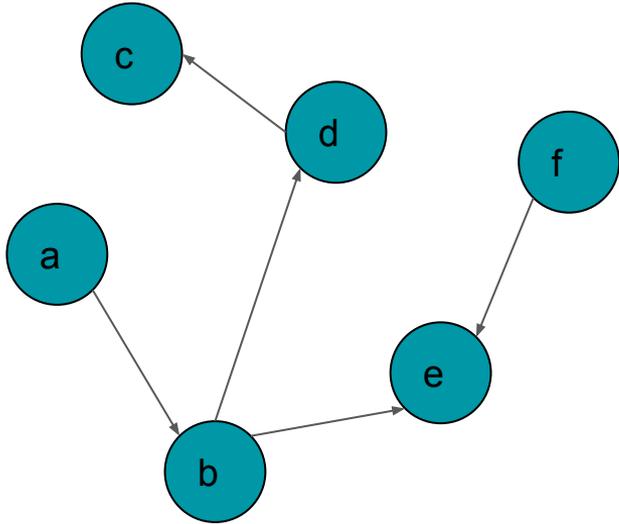

SELECT **name,amount** FROM users,accounts

WHERE users.uid = accounts.uid AND age > 23;

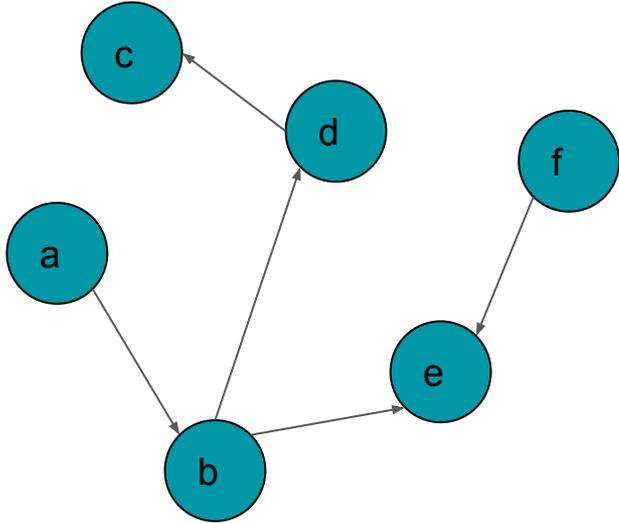

Datalog:

**J(Name,Amount)** :- users(Uid, Name, Age), accounts(Uid,  
Account\_type, Amount), Age > 23.

# Datalog: Examples

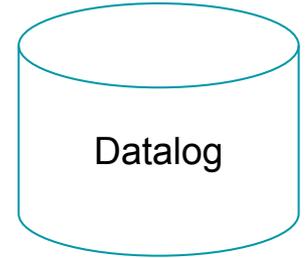

# Datalog: Examples

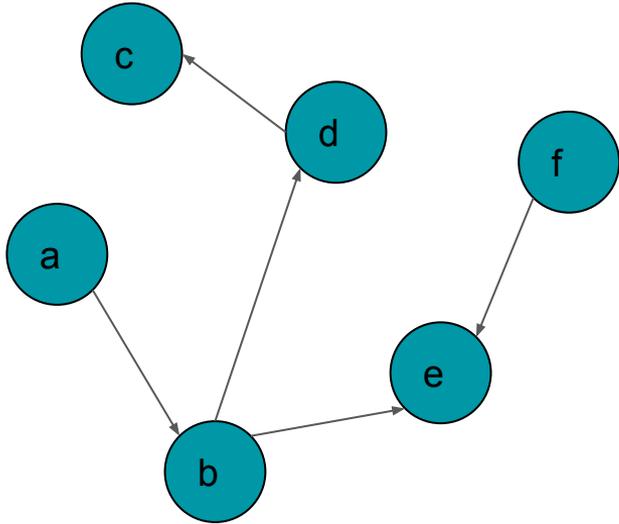

edge(a,b).  
edge(b,d).  
edge(b,e).  
edge(d,c).  
edge(f,e).

connected(X,Y) :- edge(X,Y).  
connected(X,Y) :- edge(X,Z), connected(Z,Y).

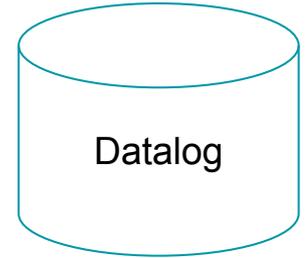

# Datalog: Examples

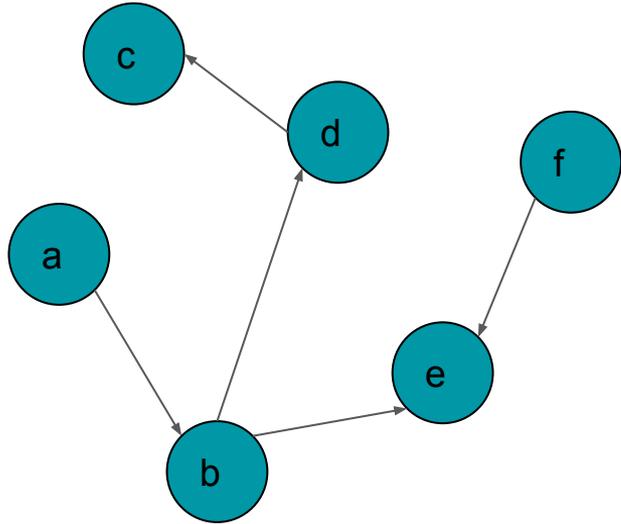

edge(a,b).  
edge(b,d).  
edge(b,e).  
edge(d,c).  
edge(f,e).

connected(X,Y) :- edge(X,Y).  
connected(X,Y) :- edge(X,Z), connected(Z,Y).

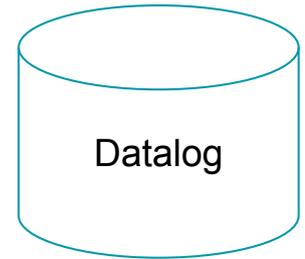

Q: List vertices that vertex 'b' have an outgoing edge to.

# Datalog: Examples

edge(a,b).  
edge(b,d).  
edge(b,e).  
edge(d,c).  
edge(f,e).

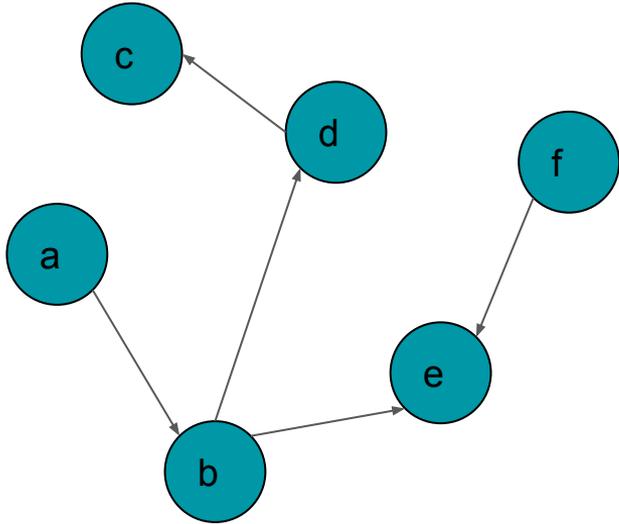

connected(X,Y) :- edge(X,Y).  
connected(X,Y) :- edge(X,Z), connected(Z,Y).

Q: List vertices that vertex 'b' have an outgoing edge to.

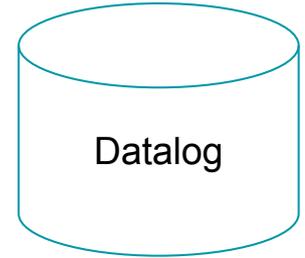

A: query(X) :- edge(b,X).

# Datalog: Examples

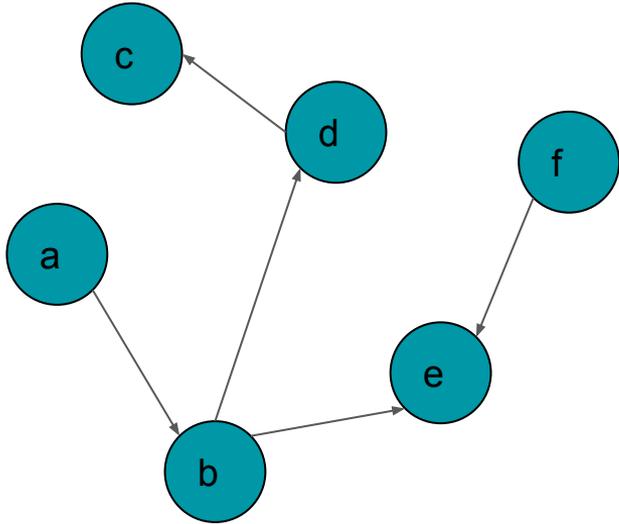

edge(a,b).  
edge(b,d).  
edge(b,e).  
edge(d,c).  
edge(f,e).

connected(X,Y) :- edge(X,Y).  
connected(X,Y) :- edge(X,Z), connected(Z,Y).

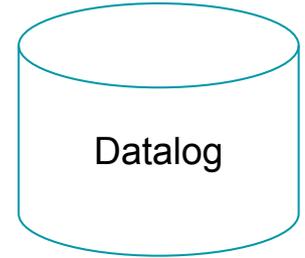

Q: List all vertex pairs (x,y), such that y is reachable from x.

# Datalog: Examples

edge(a,b).  
edge(b,d).  
edge(b,e).  
edge(d,c).  
edge(f,e).

connected(X,Y) :- edge(X,Y).  
connected(X,Y) :- edge(X,Z), connected(Z,Y).

Q: List all vertex pairs (x,y), such that y is reachable from x.

A: query(X,Y) :- connected(X,Y).

# Query Evaluation: Naïve algorithm

# Query Evaluation: Naïve algorithm

```
P0 = InitialValue  
Repeat  
    Pk = f(Pk-1)  
Until no-more-change
```

# Query Evaluation: Naïve algorithm

1. Begin by assuming all IDB relations are empty.

```
P0 = InitialValue  
Repeat  
    Pk = f(Pk-1)  
Until no-more-change
```

# Query Evaluation: Naïve algorithm

1. Begin by assuming all IDB relations are empty.
2. Repeatedly evaluate the rules using the EDB and the previous IDB to get a new IDB.

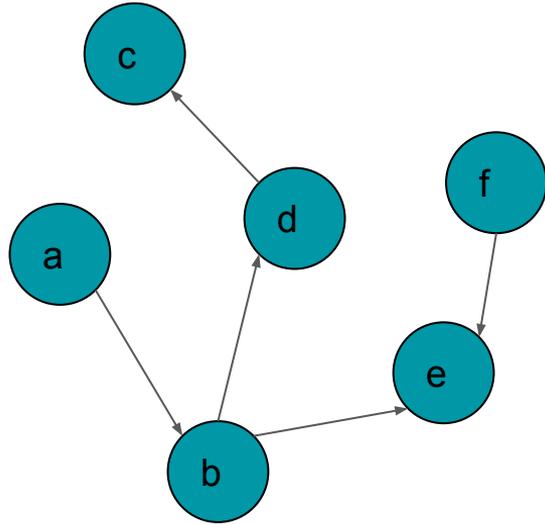

```
P0 = InitialValue  
Repeat  
    Pk = f(Pk-1)  
Until no-more-change
```

# Query Evaluation: Naïve algorithm

1. Begin by assuming all IDB relations are empty.
2. Repeatedly evaluate the rules using the EDB and the previous IDB to get a new IDB.
3. End when there is no change to the IDB.

```
P0 = InitialValue  
Repeat  
    Pk = f(Pk-1)  
Until no-more-change
```

# Conclusion

# Conclusion

Deductive databases are **more expressive** than relational databases.

Support for **recursive** queries

# Conclusion

Deductive databases are **more expressive** than relational databases.

Support for **recursive** queries

**Datalog**: query language adapted from Prolog

# Conclusion

Deductive databases are **more expressive** than relational databases.

Support for **recursive** queries

**Datalog**: query language adapted from Prolog

Focus on **query optimization**

# Conclusion

Deductive databases are **more expressive** than relational databases.

Support for **recursive** queries

**Datalog**: query language adapted from Prolog

Focus on **query optimization**

Naive vs Semi Naive query execution algorithms

Avoid **repeated computations**

# Discussion

SQL has recursion techniques like CTE

How does that compare to Datalog in terms of **expressiveness**?

**Application domains** best suited for Datalog?

Program analysis (recursion)

Declarative networking (NDlog)

Security (SeNDlog)

Applicability to general **processing frameworks**?

Hive

Spark SQL
