

Filesystem	kbytes	used	avail	capacity	Mnt
/dev/sda1	14487	14419	0	100%	/
/dev/sda2	173015	128466	27249	83%	/usr
/dev/sda3	105943	28367	66986	30%	/var

Example /usr:

Capacity = 83%

BUT Used / Kbytes =

128466 / 173015 = 74%

Used + Available =

128466 + 27249 = 155715

kbytes - 155715 =

173015 - 155715 = 17300

17300 / 173015 = ~ 10%
