HP ProLiant DL380 G5 Storage Server

installation guide

This guide provides installation and configuration information for the HP ProLiant DL380 G5 Storage Server with Microsoft® Windows® Storage Server 2003 R2.

Part number: 434182-001
First edition: September 2006

About this guide

This guide provides information for setting up and configuring the following HP ProLiant Storage Server models:

- HP ProLiant DL380 G5 Base Storage Server
- HP ProLiant DL380 G5 1.2 TB Storage Server
- HP ProLiant DL380 G5 2 TB Storage Server
- HP ProLiant DL380 G5 SAN Attach Storage Server

This guide is available on the HP web site and is also provided as a PDF document on the HP ProLiant Storage Server documentation CD.

Intended audience

This book is intended for use by technical professionals who are experienced with the following:

- Microsoft® administrative procedures
- System and storage configurations

Getting help

If you still have a question after reading this guide, contact an HP authorized service provider or access our web site: http://www.hp.com.

NOTE:

Known issues and work arounds for the storage server products and the service release are addressed in release notes. To view the latest version, visit http://www.hp.com/go/support. Select See support and troubleshooting information and enter a product name/number. Under self-help resources, select manuals (guides, supplements, addendums, etc.).

Related documentation

In addition to this guide, refer to the following documents for more information:
• HP ProLiant DL380 G5 Storage Server administration guide
• HP ProLiant 2U Rail installation instructions
• HP Integrated Lights-Out 2 User Guide

These documents are available on the Documentation CD or they can be obtained at http://www.hp.com/go/storageservers. Select your product, then click Technical documentation under the Support section.

Conventions

This document contains the following conventions and symbols:

**HP technical support**

Telephone numbers for worldwide technical support are listed on the HP support web site: [http://www.hp.com/support/](http://www.hp.com/support/).

Collect the following information before calling:
- Technical support registration number (if applicable)
- Product serial numbers
- Product model names and numbers
- Applicable error messages
- Operating system type and revision level
- Detailed, specific questions

For continuous quality improvement, calls may be recorded or monitored.

**HP subscriber’s choice**

HP strongly recommends that customers sign up online using the Subscriber’s choice web site: [http://www.hp.com/go/e-updates](http://www.hp.com/go/e-updates).

- Subscribing to this service provides you with e-mail updates on the latest product enhancements, newest versions of drivers, and
firmware documentation updates, as well as instant access to numerous other product resources.

- After signing up, you can quickly locate your products by selecting Business support, and then Storage under Product Category.

HP-authorized reseller

For the name of your nearest HP-authorized reseller:

- In the United States, call 1-800-282-6672.
- Elsewhere, visit the HP web site: http://www.hp.com. Then, click Contact HP to find locations and telephone numbers.

Other helpful web sites

For other product information, see the following HP web sites:

- http://www.hp.com/go/storage
- http://www.hp.com/support/
- http://www.docs.hp.com
- http://www.microsoft.com

HP hardware support services

HP Instant Support Enterprise Edition (ISEE) provides proactive remote monitoring, diagnostics, and troubleshooting to help you enhance the availability of your servers, as well as storage and network devices. The ISEE software is located on the storage server in the c:\hpnas\components\ISEE folder. For more information, go to the HP web site: http://h20219.www2.hp.com/services/cache/10707-0-0-225-121.aspx.

HP Services provides service tools that notify you when a significant system event has or will occur. These tools, WEBES System Event Analyzer (SEA) and OSEM, are used both as part of the ISEE remote service offering and as standalone tools to HP service customers. They are designed to send a notification only when an event or series of events has occurred that require service action. They are not intended to be real-time system state monitors that trigger with every event. Most system components have the capability of sending hundreds of state events during normal operation. SEA and OSEM are designed to filter these component events and only notify customers and/or HP Services when action needs to be taken to resolve or prevent an outage. As designed they will not report all events. Other utilities are available to monitor real time system state. The software is located on the storage server in the c:\hpnas\components\ISEE\OSEM and c:\hpnas\components\ISEE\WEBES folders.
About this guide
1 Setup overview

Your HP ProLiant storage server comes pre-installed with the Windows® Storage Server™ 2003 R2 operating system. Windows Storage Server 2003 R2 extends the Windows Storage Server 2003 operating system, providing a more efficient way to manage and control access to local and remote resources. In addition, Windows Storage Server 2003 R2 provides a scalable, security-enhanced Web platform for simplified branch server management, improved identity and access management, and more efficient storage management.

Planning for installation

Before you install your HP ProLiant storage server, you need to make a few up-front decisions.

Determining a network access method

Before beginning setup and startup procedures, you should decide upon an access method to connect to the storage server. The type of network access you select is determined by whether or not the network has a Dynamic Host Configuration Protocol (DHCP) server, as shown in "Deciding upon a network access method" on page 14. "Network access methods" on page 15 shows the types of network access methods that are available and provides more information about each one.
Figure 1 Deciding upon a network access method
Table 2 Network access methods

<table>
<thead>

<td>Yes</td>
<td>Yes</td>
<td>Indirectly from the storage server desktop.</td>
<td>See the HP Integrated Lights-Out 2 User Guide for server access instructions.</td>
</tr>
</tbody>
</table>
Planning a network configuration

You use the Rapid Startup Wizard to configure your storage server. This wizard is displayed automatically when you first start your system. Before you run the Rapid Startup Wizard, it is helpful to gather together the network configuration information you need, including:

• User name and administrator password (the system provides you with defaults you need to change)
• E-mail addresses to set up system alerts
• SNMP settings
• Local area network (LAN) configuration settings

To help you gather this information, see "Configuring the server on the network" on page 35.

Configuration checklist

Use the following checklist to make sure you have completed all configuration tasks for your HP ProLiant storage server. The steps for each task are explained in more detail in subsequent chapters of this guide.
### Table 3 Installation and Configuration checklist

<table>
<thead>
<tr>
<th>Steps</th>
<th>Reference</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Unpack server, check kit contents, and become familiar with front and back panels of storage server. Locate and write down serial number of storage server.</td>
<td>See &quot;Checking kit contents&quot; on page 20.</td>
</tr>
<tr>
<td>2. Complete rail installation instructions.</td>
<td>See the HP ProLiant rail installation instructions, if applicable.</td>
</tr>
<tr>
<td>3. Connect cables; (optional) connect a keyboard, mouse, and monitor; power on server, and log in to the server.</td>
<td>See &quot;Cabling the server&quot; on page 24, Powering on the server, and Direct attach method.</td>
</tr>
</tbody>
</table>
| 4. Access the HP Storage Server Management console.  
  • Direct attach method  
  • Remote browse method  
  • Remote desktop method  
  • iLO 2 method | See "Accessing the HP Storage Server Management console" on page 27. |
| 5. Complete the storage server configuration worksheet. | See "Server configuration worksheet" on page 35. |
| 8. Configure storage server for Web access, if necessary. | See "Configuring storage server for Web access (optional)" on page 41. |
2 Installing the server

To install your HP ProLiant storage server, follow the instructions in the sections below:

• Checking kit contents
• Becoming familiar with front/back panels
• Completing rail kit installation
• Cabling the server
• Powering on the server
Checking kit contents

Remove the contents, making sure you have all the components shown in the figure below. If components are missing, contact HP technical support.

![Figure 2 Kit contents](5255C)

**Figure 2 Kit contents**

1. HP ProLiant DL380 G5 Storage Server (with operating system preloaded)
2. HP ProLiant Storage Server System Installation and Recovery DVD
3. Product Documentation and Safety and Disposal Documentation CD
4. End User License Agreement
5. Power cords (select the correct one needed for your connection needs)
6. Slide rail Assembly
7. ProLiant Essentials Integrated Lights-Out 2 Advanced Pack

Becoming familiar with front/back panels

Become familiar with the function of the front/back panels on the server as shown in the figures below.

</tr>
</tbody>
</table>
Locating and writing down the serial number

Before completing the installation portion of this guide, locate and write down the storage server’s serial number, which may be needed to access the HP Storage Server Management console later on during the set up process.

The HP ProLiant storage server’s serial number is located in three places:

• Top of the storage server
• Back of the storage server
• Inside the storage server shipping box

Completing rail kit installation

Install the server into the rack by following the rail installation instructions for your server model. These installation instructions are provided in printed form with your server, on the HP ProLiant Storage Server Documentation CD, or at http://www.hp.com/support.

For all models of the HP ProLiant DL380 G5 Storage Server, see HP ProLiant 2U Rail installation instructions.
Cabling the server

Connect the cables in the sequence shown in the figure below.

![Figure 5 Cable connections](image)

1. NIC 2 connector
2. NIC 1 connector
3. Power cord connector
4. iLO 2 connector
5. Video connector
6. Mouse connector
7. Keyboard connector

**NOTE:**
Connecting the power cord illuminates the LEDs on the front of the bezel, the Systems Insight Display LED, and the LEDs on the NIC connector (rear panel). The iLO 2 NIC LED (rear panel) illuminates if the iLO 2 port is connected. Connecting the power cord also restores the storage server to whatever previous powered state it was last in. This could result in the server powering up, the fans operating, and the power indicator coming on.

**NOTE:**
The keyboard, mouse, and monitor are used only for the "Direct attach method" on page 27. They are not provided with your storage server.
Powering on the server

Power on the server after connecting the cables.

1. Power on server by pushing the power button (1). The power LED located on the power button illuminates green.

![Figure 6 Power on button](image)

2. When the server powers on, an installation progress screen is displayed. The installation process takes approximately 10 to 15 minutes to complete and the server will reboot twice. No user interaction is required.

⚠️ CAUTION:

Do not interrupt the installation process; when the installation sequence is complete, the system prompt appears.

3. By now you should have determined the access method for your storage server. For more information, see "Deciding upon a network access method" on page 14.

4. Go to "Accessing the HP Storage Server Management console" on page 27 to set up server access.
Before accessing the HP Storage Server Management console, verify that the storage server is completely installed in the rack, and that all cables and cords are connected. See the *HP ProLiant 2U Rail installation instructions* for additional installation guidance.

To access the HP Storage Server Management console, you can use these access methods:

- **Direct attach**
  - To connect directly to the storage server without using the network.

- **Remote browser**
  - To establish a browser-based connection to the HP ProLiant Storage Server Management console from a remote client running Internet Explorer 5.5 (or later).

- **Remote desktop**
  - To establish a connection from a remote client without using a browser. This method requires the client to have Windows remote desktop capability.

- **HP Integrated Lights-Out 2 (iLO 2)**
  - To establish a browser-based connection from a remote client using the iLO 2 interface.

For more information, see "Planning for installation" on page 13.

**IMPORTANT:**

An IP address can be substituted for a storage server’s serial number and hyphen when using either remote browser or remote desktop methods to access the HP Storage Server Management console. For example: 192.0.0.1 can be substituted for TWT08466-.

---

**Using the Direct attach method**

You can access the HP Storage Server Management console using a monitor, mouse, and keyboard directly attached to the storage server.
To connect the storage server to a network using the direct attach method

1. Log in to the HP ProLiant Storage Server with the default user name administrator and the password hpinvent.

The HP ProLiant Data Protection Storage Server Management console and Rapid Startup Wizard will start automatically.

*NOTE:*

You can change the administrator name and password when you configure the server using the "Rapid Startup Wizard" on page 38.

2. To complete network configuration using the Rapid Startup Wizard, see "Configuring the server on the network" on page 35.

Using the Remote browser method

The storage server ships with DHCP enabled on the network port. If the server is placed on a DHCP-enabled network and the serial number of the device is known, the server can be accessed through a client running Internet Explorer 5.5 (or later) on that network, using the TCP/IP 3202 port.

*IMPORTANT:*

Before you begin this procedure, ensure that you have the following:

- Windows-based PC loaded with Internet Explorer 5.5 (or later) on the same local network as the storage server
- DHCP-enabled network
- Serial number or IP address of the storage server

To connect the server to a network using the remote browser method, you must first ensure that the client is configured to download signed ActiveX controls.

To enable ActiveX controls

1. On the remote client machine, open the Internet Explorer web browser and select Tools > Internet Options > Security.
2. On the Security screen, select Internet or Local intranet web content zone, then click Custom Level.

3. Scroll down to locate the ActiveX Controls and plug-ins settings.

4. At Download signed ActiveX controls settings, select Enable to enable ActiveX or Prompt to launch a notice requiring approval before ActiveX is enabled.

5. Click OK to close the Security Settings dialog box.

6. If prompted Are you sure you want to change the security settings for this zone click YES.
7. On the Internet Options dialog box, click OK to finish.

To connect the storage server to a network using the remote browser method

1. On the remote client machine open Internet Explorer and enter https:// and the serial number of the storage server followed by a hyphen (-), and then:3202. For example, https://D4059ABC3433-:3202 Press Enter.

**NOTE:**
If you are able to determine the IP address from your DHCP server, you can substitute the IP address for the serial number and hyphen (-). For example: 192.100.0.1:3202.

2. Click OK on the Security Alert prompt.

3. Log in to the HP ProLiant Storage Server Management console with the default user name administrator and the password hpinvent.

**NOTE:**
You can change the administrator name and password when you configure the server using the "Rapid Startup Wizard" on page 38.

4. To complete network configuration using the Rapid Startup Wizard, see "Configuring the server on the network" on page 35.

**IMPORTANT:**
If you are using the remote browser method to access the HP Storage Server Management console and Rapid Startup Wizard, always close the remote session before closing your Internet browser. Closing the Internet browser does not close the remote session. Failure to close your remote session impacts the limited number of remote sessions allowed on the storage server at any given time.

Using the Remote desktop method

To connect the storage server to a network using the remote desktop method

1. On the PC client, select Start > Run. At Open, type mstsc, then click OK.
2. Enter the serial number of the storage server followed by a hyphen (-) in the **Computer** box and click **Connect**. For example: D4059ABC3433-.

**NOTE:**
If you are able to determine the IP address from your DHCP server, you can substitute the IP address for the serial number and hyphen (-). For example: 192.100.0.1.

3. Log in to the HP ProLiant Storage Server with the default user name **administrator** and the password **hpinvent**.

The HP ProLiant Data Protection Storage Server Management console and Rapid Startup Wizard will start automatically.

**NOTE:**
You can change the administrator name and password when you configure the server using the "Rapid Startup Wizard" on page 38.

4. To complete network configuration using the Rapid Startup Wizard, see "Configuring the server on the network" on page 35.

**Using the Integrated Lights-Out 2 method**

The HP iLO 2 management processor provides multiple ways to configure, update, operate, and manage servers remotely. The HP ProLiant Storage Server comes preconfigured with iLO 2 default factory settings, including a default user account and password. These settings can be found on the iLO 2 Default Network Settings tag found on the front of the server. If iLO 2 is connected to a network running DNS and DHCP, you can use it immediately without changing any settings.

For more information on using HP iLO 2, see the *HP Integrated Lights-Out 2 User Guide*. 
To quickly setup iLO 2 using the default settings for iLO 2 Standard and iLO 2 Advanced features, follow the steps below.

1. Ensure that a network cable is connected to the iLO 2 port (1) located on the back of the storage server.

![Figure 8 iLO 2 connector port](image)

**NOTE:**
This connection method is easiest when the connection is to a DHCP and DNS supported network.

2. If not using dynamic DHCP (IP addressing), you will need to input a static IP address by using the direct attach method and the iLO 2 RBSU.

**NOTE:**
To find the default iLO 2 log in settings, see the iLO 2 Default Network Settings card attached to your server. The default DNS, administrator name, and password needed to log in will be on this card.

4. If desired, you can change the default user name and password on the administrator account to your predefined selections.

5. Set up your user accounts, if using the local accounts feature.

6. Activate iLO 2 advanced features by entering a license key from the included *Proliant Essentials Integrated Lights-Out 2 Advanced Pack*.

7. Access the HP ProLiant Storage Server using the iLO 2 Remote Console functionality. Log in to the HP ProLiant Storage Server with the default user name *administrator* and the password *hpinvent*. The HP ProLiant Storage Server Management console starts automatically.

32 Accessing the HP Storage Server Management console
NOTE:

When the Remote Console feature is enabled, you can get access to the storage server’s login screen.

For more information, see the *HP Integrated Lights-Out 2 User Guide* on the HP ProLiant DL380 G5 Storage Server Documentation CD.
4 Configuring the server on the network

Before you begin

When first powering on the storage server you need to have some configuration data readily available to complete the Rapid Startup Wizard. Complete the Server configuration worksheet and use the data collected to initialize the storage server.

NOTE:

Ensure you are logged into the HP ProLiant Storage Server as a local or domain administrator.

</table>

**Network Interfaces** (to be completed for non-DHCP configurations)

| **Local area connection 1** | A local area connection is automatically created for each network adapter that is detected. |
| **IP address** | An Internet Protocol (IP) address is assigned to the server. If it is not automatically assigned, enter the IP address that you want to assign to this server. |
| **Subnet mask** | A mask is used to determine what subnet an IP address belongs to. |
| **Default gateway** | The gateway in a network that the network adapter will use to access all other networks. |
| **Local area connection 2** | Any additional local area connections can be renamed to prevent confusion. |
| **IP address** | Same as above. |
| **Subnet mask** | Same as above. |
| **Default gateway** | Same as above. |
| **iLO 2 settings** | Change the host name, IP settings, and administrator settings. |

<th>A Domain Name System (DNS) server name is required to provide for domain name to IP address resolution.</th>
</tr>
</thead>
<tbody>
<tr>
<td>WINS server</td>
<td>A Windows Internet Naming Service (WINS) server name is required to determine the IP address associated with a particular network computer.</td>
</tr>
</tbody>
</table>

## Server Name

| Server name | Assign a unique name to the storage server. This name identifies the storage server on the network. |
Running the Rapid Startup Wizard

The Rapid Startup Wizard is only displayed during the initial setup process. This wizard guides you through the configuration process.

**Figure 9 Rapid Startup Wizard**

The Rapid Startup Wizard guides you through configuring the following system settings:

- Date, time, and time zone
- Administrator Identity (user name and password)
- Alert e-mail notification
- Integrated Lights-Out 2 (iLO 2) settings
- Simple Network Management Protocol (SNMP) Settings
- Network Interfaces
- Server Name

For more information about the configuration settings available in the Rapid Startup Wizard, click **Help** to see the corresponding Rapid Startup Wizard online help topic.

38   Configuring the server on the network
5 Complete system configuration

Additional configuration tasks

The physical installation and basic configuration for the HP ProLiant storage server is complete. Additional settings and configuration tasks specific to the storage server role can be found in the HP ProLiant DL380 G5 Storage Server administration guide on the HP ProLiant Storage Server Documentation CD.

The HP ProLiant Storage Server administration guide includes:

• Configuring and managing the file server role
• Configuring and managing the print server role
• Other network file and print services
• Microsoft Cluster Service (applicable models only)
• NIC teaming

**IMPORTANT:**
HP recommends performing a full system backup before putting the system into production.

**NOTE:**
For DL380 G5 storage servers, see the SAN Connection and Management white paper located on the Documentation CD for installation and configuration steps related to SAN Connectivity.

Other configuration tasks not found in the HP ProLiant DL380 G5 administration guide that should be performed include:

• Run Microsoft Update for new critical updates, see "Configuring storage server for Web access (optional)" on page 41.
• Join the storage server to an Active Directory domain or workgroup.
• Create and manage users and groups.
• Adjust logging for system, application and security events.
Complete system configuration

- Install additional third-party software, such as backup, anti-virus, or monitoring agents.
A Configuring storage server for Web access (optional)

Setting up an Internet connection

Before running Windows 2003 R2 operating system updates, you must set up an Internet connection for the storage server. There are two methods for configuring an Internet connection:

- Internet Explorer to use automatic configuration
- Internet Explorer to use a proxy server

To configure Internet Explorer to use automatic configuration

1. On the Tools menu in Internet Explorer, click Internet Options, click the Connections tab, and then click LAN Settings.
2. Under Automatic Configuration, click either the Automatically detect settings or Use automatic configuration script check box.

![Figure 10 Automatic configuration settings](image)

3. Click OK to close the LAN Settings dialog box.
4. Click OK again to close the Internet Options dialog box.

To configure Internet Explorer to use a proxy server

1. On the Tools menu in Internet Explorer, click Internet Options, click the Connections tab, and then click LAN Settings.
2. Under **Proxy server**, click the **Use a proxy server for your LAN** check box.

![Proxy server settings](image)

**Figure 11 Proxy server settings**

3. In the **Address** box, type the network name or IP address of the proxy server.

4. In the **Port** box, type the port number that is used by the proxy server for client connections (for example, 8080).

5. Click the **Bypass proxy server for local addresses** check box if you do not want the proxy server computer to be used when you connect to a computer on the local network.

6. Click **OK** to close the **LAN Settings** dialog box.

7. Click **OK** again to close the **Internet Options** dialog box.
