1 hexagon block

1 block consisting of 2 hexagons

3 blocks consisting of 3 hexagons

Gemblo is a simple game but requires various strategies and is an exciting and new game everytime you play it.

Goal of this game The goal is to put one's blocks on the game board as many as possible.

Preparation for game After putting the game board in the place where all players can put their blocks easily, each player put a set of blocks of each color he/she wants (18) in front of him/her.

How to play a game The first gamer starts after deciding a first player. Put your block on the starting point. And other gamer put his/her block one after another clockwise.

The following blocks should be always put in the space connected in a straight line to the block you put.

(See the arrow in picture A). Therefore, you can start from one space among 1-7 spaces. As shown in picture B,

you can put a block by making No. 4 as a connection and like picture C, you can put by making No. 4 and 5 as connections at the same time. **Note: Blocks of the same colors shouldn't be touched.**

Interception

As shown in picture D, if another block (a yellow block of picture D) is put next to your block, you cannot use No. 4 as a connection. You cannot jump over the opponent's block

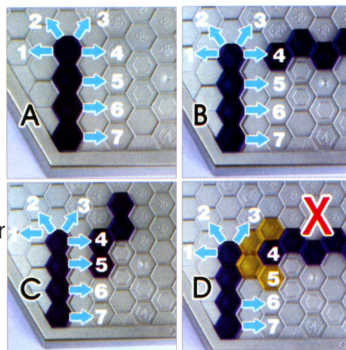

(Picture D, possible spaces - 1,2,3,6,7)

Though one gamer has no blocks to put, the game goes on until all gamers cannot put their blocks any more.

End of the game

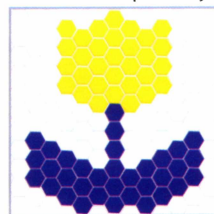

If all gamers cannot put blocks on the game board anymore, the game is finished.

The gamer with the least number of remaining hexagon blocks is the winner.

Puzzle game for 1 person

Also, you can enjoy various puzzle games with blocks and spread your creativity freely.
