The graph illustrates the precision of different accumulator limits and terms for two types of processors: micro P5 and macro P5.

- **Micro P5**:
  - **Upper Line**: No accumulator limit
  - **Lower Line**: 80 terms, 80k accumulators

- **Macro P5**:
  - **Upper Line**: 80k accumulators
  - **Lower Line**: 80 terms, 80k accumulators

The x-axis represents the df limit (thousands), ranging from 10 to 1000. The y-axis represents precision, with values ranging from 0.15 to 0.45.
