

University of Waterloo David R. Cheriton School of Computer Science Cloud Computing Course

Distributed Model Verification Using Map-Reduce

Presented By Fathiyeh Faghih

March 2010

Waterloo Project Objective

Using cloud computing in software verification

Saving time, especially for big software!

Waterloo Table of Content

Background of Certification

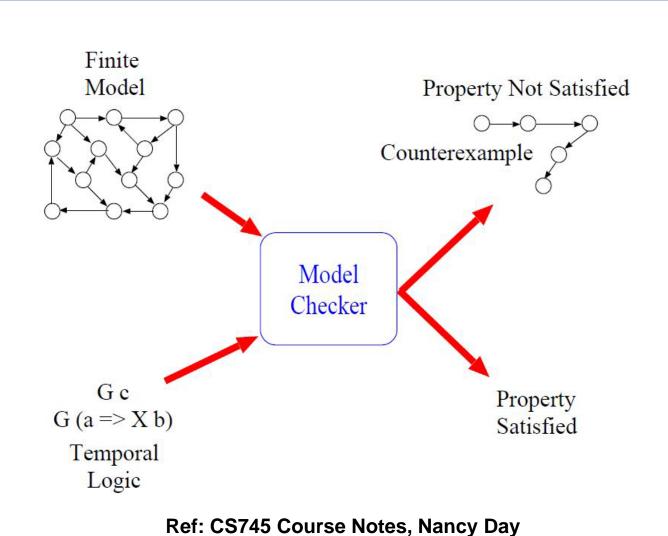

Parallel Certification

- •Background of Certification
- Parallel Certification
- •Implementation Details

Component-based Software Engineering

- •Background of Certification
- Parallel Certification
- •Implementation Details
- Assembly of pre-existing components

Components' correctness

Component-based Software Engineering

- •Background of Certification
- Parallel Certification
- •Implementation Details

- Component producer
 - Non-trusted
 - Does it work as advertised?
 - Trusted
 - Assessing additional properties

Search Carrying Code (SCC)

- •Background of Certification
- Parallel Certification
- •Implementation
 Details

Help the code consumer to do model checking

Recording the search path in search scripts

70% saving in the model checking time

Search Carrying Code (SCC)

- •Background of Certification
- Parallel Certification
- •Implementation Details

- Trustful certification
 - Checking additional properties

- Tamper proof certification
 - Correctness of the search script

 Details

Parallel Trustful Certification

- •Background of Certification
 - Parallel Certification
 - •Implementation
 Details

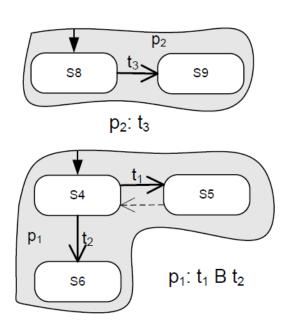

- •Background of Certification
- Parallel Certification
- •Implementation
 Details

- Partitions of the search script
- Forcing the Map-Reduce not to partition the input files

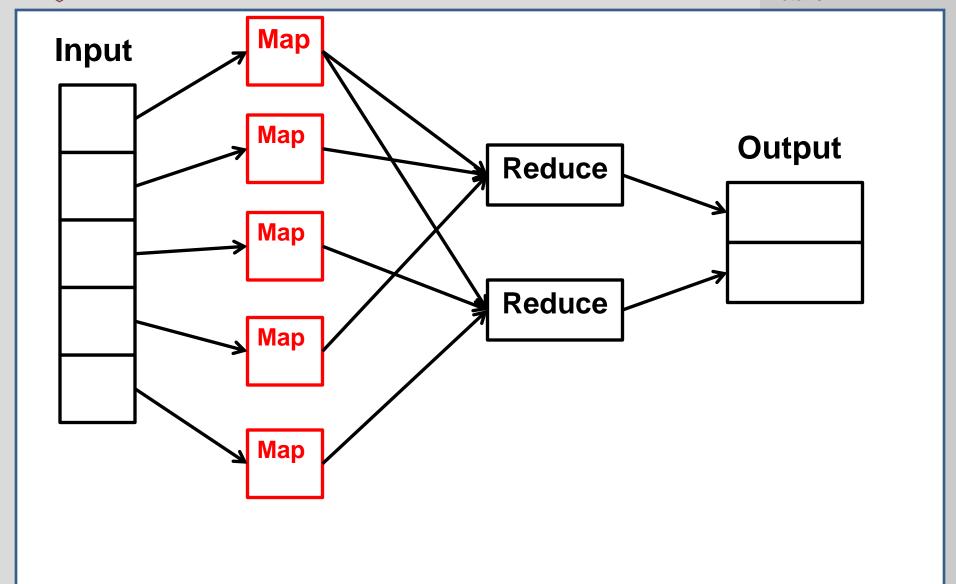

Parallel Trustful Certification

- •Background of Certification
- Parallel Certification
- •Implementation
 Details

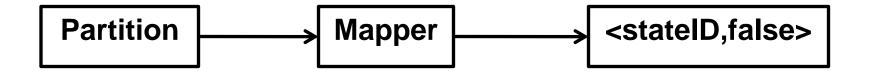

Mapper Function

- •Background of Certification
- Parallel Certification
- •Implementation
 Details

Model checking of the partition

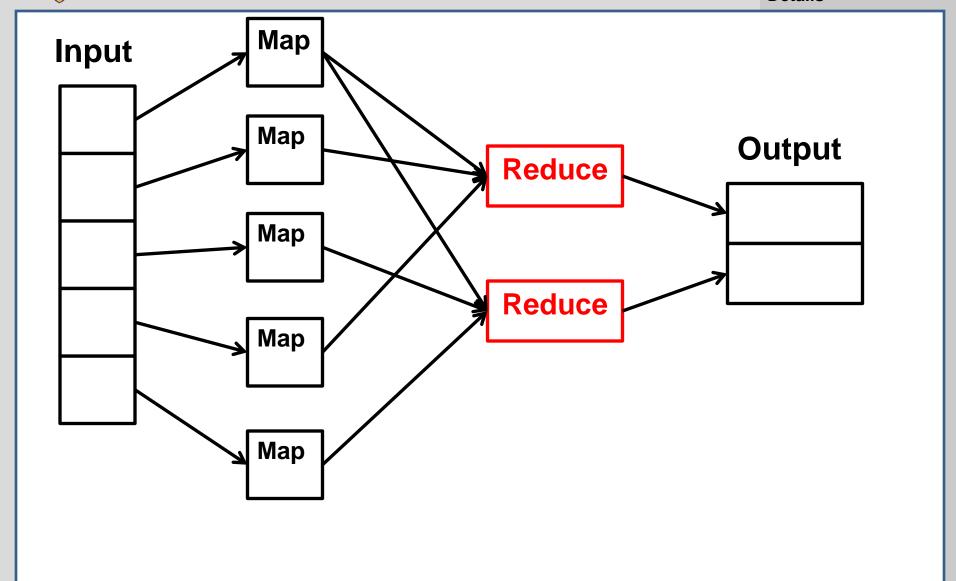

Java Pathfinder

Reducer Function

- Background of Certification
- Parallel Certification
- •Implementation
 Details

- •Background of Certification
- Parallel Certification
- •Implementation
 Details

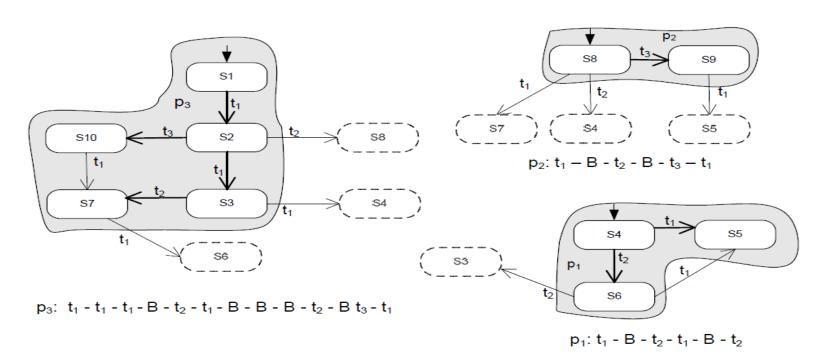

Checking whether the program is certified or not

Producing counterexamples

- Background of Certification
- Parallel Certification
- •Implementation
 Details

Trustful

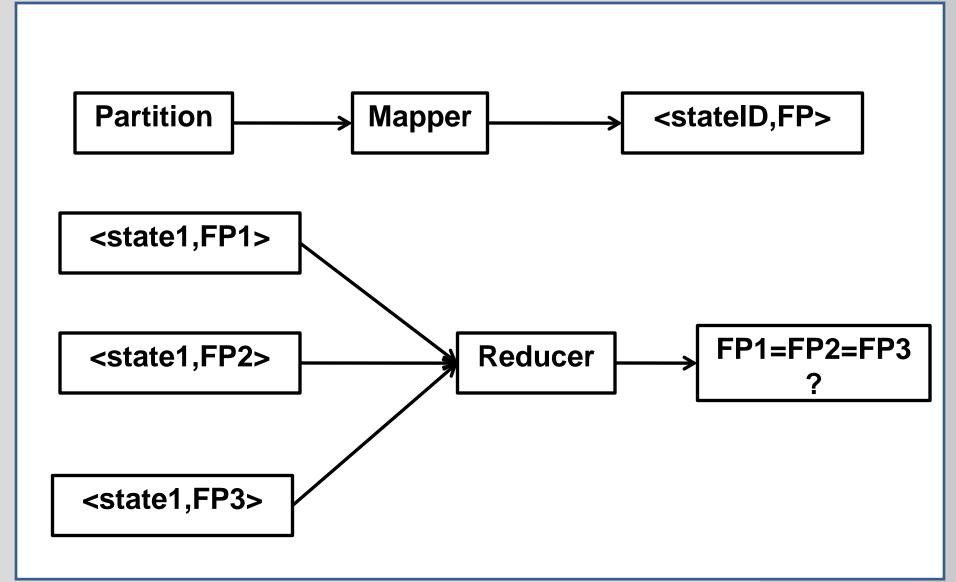

Tamper proof

Parallel Tamper Proof Certification

- •Background of Certification

Waterloo Table of Content

Background of Certification

Parallel Certification

- •Background of Certification
- Parallel Certification
- •Implementation Details

- Karmasphere Studio
 - Plugin to NetBeans IDE
 - Develop and debug MapReduce jobs on your desktop
 - Deploy jobs to remote Hadoop clusters

- Trustful certification
 - Testing the deployment on the desktop

- •Background of Certification
- Parallel Certification
- •Implementation Details

- Deploying the application on Amazon
 - Creating images with JPF installed and configured

- Using the JPF suitable for tamper proof
 - Modifying the reducer

- •Background of Certification
- Parallel Certification
- •Implementation Details
- The time needed to do certification vs. the time needed for model checking
 - Trustful
 - Tamper proof

- Experimenting on different numbers of partitions
 - Optimal number for each number of states?
 - Independent of the shape of the graph?
