CS898 - Technological Solutions to Social Problems of Computing  
Fall 2019  
Prof. Robin Cohen  

Time and location: (Monday mornings 930am-1120am; DC2568)  

This message is dated July 29, 2019.

Students may freely enrol in CS898 in Quest when the enrolment window opens. It may appear at times that the enrolment cap of 16 has been exceeded. This is just an artefact of the enrolment system and my independent effort to ensure that some of my own students can get a seat in the class. When Audits are accepted into the course, the enrolment cap is exceeded also. Due to various course constraints, the posted enrolment cap will consistently remain at 16.

If you are interested in the course but have been unable to register for it in Quest: a) please do show up to the first class on Sep 9; the course will be settled in full by Sep 16 b) you are welcome to contact me and if you do, please let me know your name, email, student number, whether you are PhD or Masters, and if Masters whether thesis or coursebased. I am hoping for a nice blend of students in the course, PhD and Masters (thesis and coursebased). You may express this interest even if the course appears to be full.

If you are interested in Auditing the course, you can let me know.

Please note that I am entirely offline Aug 18 to Aug 24 inclusive.

If you are not a Computer Science grad student, the chances of getting into the course are exceedingly small.

My understanding is that the CS Grad Office will end up requiring instructor permission for the course, if the course fills up and then there are drops. Please note that if the course appears to have free seats, that may also be deceptive. It may be the case that students with permission numbers have not yet used them or that I have not yet processed all the requests for a spot in the course.
